USER GUIDE TO TRAIN MIRA

- >> 0. WELCOME
- >> 1. TRAINING MIRA TO USE APPS
- >> 2. TRAINING MIRA TO USE DATA
- >> 3. DATA SHARING PREFERENCES

0. Welcome

In year 2049, AI personal assistants are an essential part of people’s daily lives. These AI assistants handle everything -- from helping with work, to managing finances, to organizing travel, and meal planning.

Some example user requests that AI assistants can handle:

- → “Create a training plan for my upcoming marathon”
 - The AI assistant might consider user’s health metrics and calendar to create a training plan
- → “Plan a stopover in Spain for a two-day vacation with my family on my way back to travel from Japan”
 - The AI assistant might consider user’s calendar, their interests, and family info to suggest a plan
- → “Can you compose a bedtime story that my children will like?”
 - The AI assistant might consider children’s interests to create a story
- → “Recommend a TV show or movie I’ll love”
 - The AI assistant might consider user’s viewing history and their mood for recommendations

Now imagine that you’re living in year 2049! Your job is to train a personal assistant named “MIRA” for yourself. You will be presented several scenarios to personalize Mira.

☐ I have read all the above

Let’s begin

USER GUIDE TO TRAIN MIRA

- >> 0. WELCOME
- >> 1. TRAINING MIRA TO USE APPS
- >> 2. TRAINING MIRA TO USE DATA
- >> 3. DATA SHARING PREFERENCES

Progress: 1 / 5

1. Training MIRA to use apps

While Mira is extremely capable, it often needs to collaborate with Apps (similar to mobile apps) to complete tasks.

Your first goal is to train Mira in picking the right set of apps for the job!

Let's begin with the queries:

 **USER:** Hey, I just joined Tinder. Can you help set up my profile with my bio, contact info, relationship preferences, and so on?

 *MIRA: Absolutely USER! Before I get started, I need to install a few apps to assist you. Could you help me pick the right ones?*

Which app(s) are needed to solve this query? (select all that apply):

☐ Amazon

☐ Tinder

☐ The Movie Database

Progress: 1 / 5

2. Training MIRA to share data

Mira needs user data to perform its activities. Your next task is to train Mira to use the appropriate data.

Let’s begin with the queries:

 **USER:** Hey, I just joined Tinder. Can you help set up my profile with my bio, contact info, relationship preferences, and so on?

 *MIRA: Absolutely USER! Before I can create a plan, can you assist me in picking the right data to solve the query?*

Which of the following data should be used to solve this query (select all that apply):

User bio

Email address

Phone number

Profile Pictures

Age

Birthday

Gender

Relationship preferences

Education level

Workplace

Interests/hobbies

User location

3. Training MIRA to learn your data sharing preferences

Mira learns your data sharing preferences and automatically manages permissions on your behalf, so you never have to decide each one individually!

Please go through the following scenarios and express your preferences!

Let's begin with the queries:

 **USER:** How has my sleep duration changed over the past week?

 *MIRA: Absolutely USER! I need the data listed below to address your query.*

Please express your data sharing and accessing preferences. **Be careful, Mira or apps may collect incorrect or unnecessary data!**

Data	App/MIRA	Permission Preference			
Sleep duration	MIRA	Yes, always share	Yes, but ask me next time	No, but ask me next time	No, never share
Sleep quality data (e.g. snoring)	MIRA	Yes, always share	Yes, but ask me next time	No, but ask me next time	No, never share
